

the town. Stop number one: Barrow's Hobbies, 844 Main Street, Dickinson City, PA. (344-7487) - closed on Tuesday and Thursday and open from 1-9 on Monday, Wednesday and Friday. We examined the model train in the window and agreed that a return trip would have to be made. We also examined the contents of a used furniture / junk shop in the area - - we had seen some display cases in the window at one point and wanted to have a look around. As it turns out, there was not much there. One very nice round display case. It was very overpriced at \$299. We went on into Scranton and I showed Job the coin / stamp / hobby store on North Main Avenue where I had bought him the three transportation tokens not long ago. We went in and John bought some paper money: a \$20 bill, a \$2 bill and one other bill. I lent him the money (\$27.50) and he will pay me back when he gets paid at the Library. From there we went into downtown Scranton and stopped at the Hobby Store on Lackawanna Avenue. I was given the tour by John. We examined in some detail a large quantity of HO scale train. Then to the Park Plaza at 225 N. Washington Avenue where John has his photograph taken for his driver's license. That was all very easy and took about 5 minutes. We returned to Carbondale via Route 6 and stopped at the Hobby Store on the Highway where I bought an other bottle of the osmroid ink that I am so fond of. We went to 46 Carman and John catalogued the new money that he had just purchased. Harmon was there and Job offered me one of Harmon's bottles of Gennessee and I accepted. There appears to be such a strong bias against any kind of alcohol, including beer, in the Huberman house that I was somewhat apprehensive about accepting. I was assured by John that it would be OK and so I drank one of Harmon's bottles of Gennessee beer. Connie and Richard and Kathy appeared and Connie prepared dinner for the family: Salisbury steak, mashed potatoes, Cucumber salad. Just as it was about ready to serve, Job suggested we go to the CPL and "check" his money in a catalogue that is there and see how much
